Stylish, versatile and secure stable door solutions

The appealing cottage style appearance of the Dorlux Stable Door combines its crisp clean design benefits and robust materials rigorously tested to ensure long lasting performance with angled profile faces to dispel dirt and water for low maintenance and upkeep.

One of the many integral features of the door is the versatility of the high security multipoint locking mechanism.

The top sash can be opened independently to provide additional ventilation as required, with the bottom sash securely locked to contain small children and pets.

Due to a cleverly designed snapper catch which holds the two sashes together, the door can be used as a conventional single sash, without the need for a complicated retaining mechanism.

To permit a wide variety of applications, Dorlux Doors are available with a choice of thresholds and optional surface finishes including Golden Oak, Woodgrain, Rosewood and White.

A Stable Door suits most property types and they can be designed to the discerning homeowners choice.

Dorlux Doors can bring a certain character and charm to any deserving home, combined with all the benefits of a modern product for todays busy lifestyles they ensure durability, performance, security, looks and low maintenance.

- Pet doors available on some designs.
- Safe T Catch for additional security/ventilation.
- Controllable trickle ventilators.
- Concealed opening restrictors.
- A full range of matching top lights, side panels & standard doors available.

Safe & Secure

The Dorluxe range of fully steel reinforced stable doors all incorporate a well proven high security multi point locking system.

Tempered steel hook bolts engage upwardly into rigid steel keeps set into the integral reinforcement of the frame providing enhanced security with an anti-jimmy feature ensuring maximum resistance to forced entry, these in built features combined with additional adjustable roller cams ensure both a secure and weather tight seal.

A key locking handle ensures the lower sash can be kept securely closed whilst the upper sash can be operated independently. The upper sash of the door is deadlocked by a key operated security cylinder with the option of an auto latch facility. This option requires the use of a key for external access at all times.

Both upper and lower sashes are locked together by a unique concealed snapper catch mechanism which allows the door to be opened as a conventional single leaf.

The security of the door can be further enhanced by the addition of a Safe 'T' Catch, this cleverly designed concealed mechanism provides the perfect modern solution to the traditional surface mounted safety chain.

The robust construction of the four fully adjustable flag hinges has been proven to resist the most forceful of attacks. Each hinge has four steel pins that penetrate the integral steel reinforcing of both door frame and sash, the hinges are also adjustable in three dimensions to ensure long lasting performance with the added benefit of ultra low maintenance.

All furniture and fittings used on the Dorluxe range of doors are designed and manufactured to meet the highest standards and have been subjected to rigorous testing to ensure faultless performance, this, combined with the most advanced surface coating technology available ensures not only long lasting performance but the appearance to match.
